ALU**KAP®-XR**

Superior Roof Glazing System
Installation Guide

Your ALUKAP®-XR System

Whether you are planning your next project using ALUKAP®-XR, or have just purchased your ALUKAP®-XR system, this *Installation Guide* provides the information you may require to make the installation of your ALUKAP®-XR system straightforward. The system is inherently intuitive, however these guidelines will provide an additional layer of support, no matter how complex your project is.

We Are Here To Support You

We understand that even with comprehensive Installation Guidelines, there can sometimes be a question that you can't find the answer to, so we're here to help you all the way. Visit **www.clearamber.com** and get in contact with our Help Teams via live chat, phone or email, who will be on hand to assist with any queries you may have.

Index:

Part 1 : ALUKAP®-XR Bar Parts Available

Below is a list of the core ALUKAP®-XR Glazing Bar types available and items that could be supplied with each bar, most of which you will need for your project, depending on the design of your project.

ALUKAP®-XR Wall Bar	**ALUKAP®-XR 60mm Bar**	**ALUKAP®-XR Gable Bar**	**ALUKAP®-XR 45mm Bar**	**Standard Bar Gaskets and Screws** (included)
ALUKAP®-XR	ALUKAP®-XR	ALUKAP®-XR	ALUKAP®-XR	

One Standard Bar End Cap (included)

ALUKAP®

Rafter Gasket options available for each bar type:

45mm Rafter Gasket	**45mm Slot-fit Rafter Gasket**	**55mm Rafter Gasket**	**55mm Slot-fit Rafter Gasket**

Glazing Sheets and Accessories:

AXIOME® 16mm Triplewall Sheets
(also in 4mm, 6mm, 10mm, 25mm and 35mm)

AXGARD® Polycarbonate Sheets
(also in 4mm, 5mm, 6mm, 8mm, 10mm and 12mm)

Double Glazed Units

Glass

ALUKAP®-XR Top Wall Flashing

NEW

ALUKAP®-XR

SECURBOND® Flashing Tape

SECURBOND®

16mm Endstop bar
(also in: 6.4mm, 10mm, 25mm, 28mm and 35mm)

ALUKAP®-XR

Timber Rafters and Battens

Anti-dust tape

ALUKAP®-XR

*Optional item

Tools Required

Protective gloves and glasses

Tape measure and fine toothed bladed Chop Saw

Cordless screwdriver/drill, Philips headed screwdriver, soft rubber headed hammer, a straight edge tool and AXIOME® compatible sealant plus a sealant gun.

ALU**KAP**®-XR

ALUKAP®-XR : Bars and Glazing Installation Guide

1 Take all **measurements** of the roof rafters

IMPORTANT: Wear sufficient protective clothing

Measure and cut all ALUKAP®-XR bars to the desired length. Allowing approx. 30-50mm overhang into the gutter.

Measure the roof to work out how many AXIOME® / glazing sheets are required.

Cut lengths of the **wider Rafter Gaskets** to the **same dimensions as the ALUKAP®-XR base bars** (one for each bar).

Cut **two lengths** of the **thin standard bar gasket** to the same length as the ALUKAP®-XR base bar **>**

2 Prepare the **AXIOME® SHEETS** before installation

Where applicable, fit the **ALUKAP®-XR End Stop Bar** to the edge of the glazing material which works with ALUKAP®-XR glazing bars creating a frame to seal the glazing material and reduce any risk of slippage.
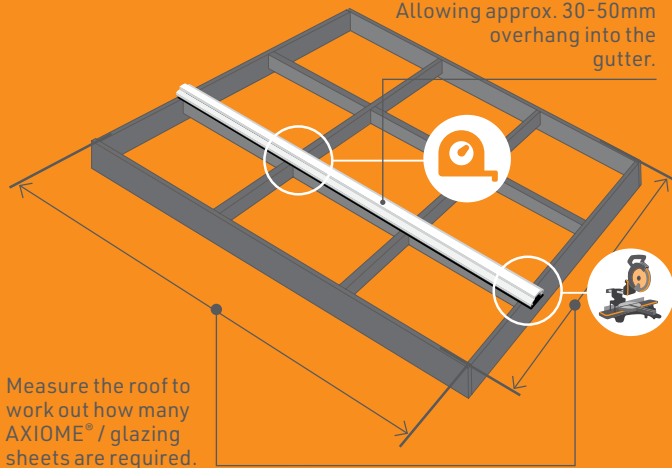

IMPORTANT – Store the AXIOME® sheets in **a clean, dry area** to prevent moisture getting into the flutes.

There is **protective film on both sides** of the AXIOME® sheet. The AXIOME® branded tape side is **UV protected**.

AX**IOME**®

UV
Ensure that you are working in a **clean dry area, pull the protective film back approximately 100mm from the open edge on both sides**, taking care not to scratch the surface.

3 Apply the **ANTI-DUST TAPE** to the AXIOME® sheets

IMPORTANT – All adhesives suffer reduced initial bonding strength in cold conditions – **avoid applying tape below 5°C.**
Stick the **AXIOME® Anti-dust Breather Tape** onto the top surface in a straight line from one side to the other, allowing enough to wrap around and bond to the underside. **If it is necessary to join the tape mid-panel, ensure that there is a minimum 25mm overlap**.

4 Apply the **ALUKAP®XR Endstop bar** to the AXIOME® sheets

Cut the Endstop Bar to the width of each AXIOME® Sheet, and **push-fit partway ONLY** so that the open edge of the Endstop Bar just covers about **10-15mm of the glazing material**.

Protective film

Anti-dust breather tape

5 Apply the **AXIOME® compatible sealant**

Run a thin, consistant bead of AXIOME® compatible sealant along the edge of the **Endstop bar** and **Anti-dust Breather Tape**.
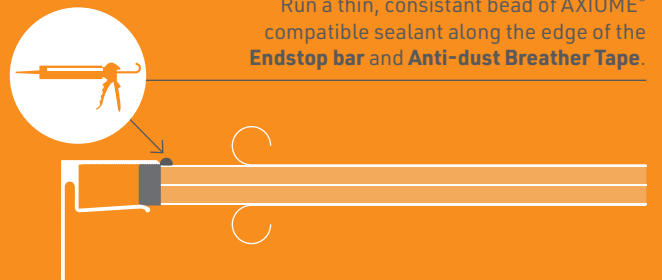

6 **Final stage** of fitting the ALUKAP®-XR Endstop Bar

PUSH the **ALUKAP®-XR Endstop bar FULLY into place**, so that the leading edge slides over the bead of sealant, creating a seal that eliminates capillary action.
Leave the protective film on both sides while building your roof.

7 Fit the Standard Bar Gaskets to the ALUKAP®-XR base bar

Carefully **INSERT** the thin Standard Bar Gaskets **into the grooves** on the base of the bar **ensuring that the gasket matches the contours of the ALUKAP®-XR Base Bar.**

ALUKAP®-XR base bar

Standard bar gaskets
8 Fit the Rafter Gaskets to the existing rafters

Position the ALUKAP®-XR rafter gasket over the existing rafters.

Rafter gasket

Timber Rafter
9 Position the prepared glazing sheets onto the rafters

Lay your glazing materials on top of the rafter gasket and rafters, allowing enough space in between the sheets for the fixing screws and thermal expansion appropriate to the chosen glazing material.

AXIOME®

12mm

ALUKAP®-XR

Wall bars: Deduct 38mm

Deduct 12mm

Deduct 12mm

Gable bars: Deduct 42mm

NOTE – ALUKAP®-XR Gable and Wall Bars ONLY

- **When using AXIOME® or AXGARD® the material can be extended right across the rafter under the outermost ALUKAP®-XR bar gasket.**

- Where **glass** is chosen for the glazing material rather than AXIOME® or AXGARD®, the ALUKAP®-XR Wall and Gable bars will require **a timber packer** under the outer edge gasket. **The battens width is [12mm] and height (x) equates to the glazing thickness plus 2mm.** The ALUKAP®-XR rafter gasket should run under the timber packer.

10 Fitting the ALUKAP-XR base bars

1. Lay the ALUKAP®-XR base bars **directly above the each rafter**, on top of the glazing material.

2. **Drill pilot holes through the pre-drilled holes** in the ALUKAP®-XR base bar, into the rafter as required.

3. **Screw the ALUKAP®-XR base bar into place**, taking care not to over-tighten the screw, **but ensuring they are tight enough that the gaskets create a uniform seal with the glazing material.**

AXIOME®
ALUKAP®-XR

ALU**KAP**®-XR

11   **Fit the ALUKAP End Cap** to the front of each bar

1. Place the ALUKAP® End Cap into place at the end of the base bar butting up against the ALUKAP®-XR End Stop Bar / glazing material.

2. Make a marking on the base bar to position the screw fixing, remove the End Cap and drill a 2.5mm hole into the ALUKAP®-XR base bar to suit the screw for the ALUKAP®-XR End Cap.

3. Place the ALUKAP® End Cap back into place and use the short screw provided to secure in place.
Make any ADDITIONAL SEALS with a suitable sealant as required where the Alukap-XR base bar makes any abutments or connections to Walls, Hip bars or Ridge bars.

Timber Rafter

SECTION DETAIL

12   **Measure and cut the ALUKAP®-XR Top Clips** for each bar

1. **Carefully cut the ALUKAP®-XR Wall, Standard Bar and Gable Bar Top Clips to the accurate length required** including any mitre or angled cuts for a perfect aesthetically pleasing finish.

2. **For sealing the ALUKAP®-XR Wall Bars to the wall,** administer a **suitable sealant to the ribbed backing** of the ALUKAP®-XR Wall Bar to create an abutment to the adjacent wall. Then dress a lead flashing or flashing tape over the upstand of the ALUKAP®-XR Wall Bar.
13

Fit the ALUKAP®-XR Top Clips to each bar

1. Using a **suitable rubber/plastic headed hammer**, carefully snap the ALUKAP®-XR top clips onto the base bar along the whole length concealing the fixings.

2. **For sealing the completed roof structure at the back,** administer a **suitable sealant** or fit **lead flashing or flashing tape** across the back wall, dressing it down over the glazing by approximately 150mm-200mm depending on your pitch.

3. **Remove the protective film on both sided** when the roof is fully installed.

AXIOME®

ALUKAP®-XR

ALUKAP

ALUKAP

ALUKAP

ALUKAP

IMPORTANT – Once the **AXIOME® sheet has been installed, remove the protective film on both sides immediately**, **making sure that it's clean before removal**, so that dirt or dust particles are not transferred to the surface of the AXIOME® sheet.

ANY CLEANING REQUIRES the use of plenty of clean, soapy water and a soft, abrasive-free cloth.
14

Finish of the back of the lean-to roof — fit the **ALUKAP®-XR Top Wall Flashing**

Place, **measure** and **cut** the aluminium **ALUKAP®-XR Top Wall Flashing** and **foam gasket** to match the full width of the roof. Place the Top Wall Flashing onto your roof and mark on the foam gasket where each glazing bar meets Top Wall Flashing. Then cut out a notch at each mark so that the Foam Gasket sits flat on the AXIOME® Sheets and over each Glazing Bar. Alternatively, you can simply apply downward pressure to compress the foam gasket at each glazing bar to ensure the Foam Gasket Seals against the AXIOME® sheets properly.

Push down the prepared **ALUKAP®-XR Top Wall Flashing** with the prepared gasket in place and fix to the wall using suitable stainless steel screws.

Pull the protective film back from the back of the glazing sheets enough to clear the foam gasket.

ALUKAP®-XR Standard Finial

ALUKAP®-XR Ball Finial, fixing bolt (included).

ALUKAP®-XR Valley Bar, plus Standard Bar Gaskets incl:

ALUKAP®-XR Horizontal H-section Bars:

24/25mm bar (most common)

28mm bar

32mm bar

ALUKAP®-XR : Hip Bar

15 The ALUKAP®-XR Hip Bar

1. The ALUKAP®-XR Hip Base Bar should be installed using the same method as the standard ALUKAP®-XR glazing bars as shown in Part 1.

4. **Finally** the **ALUKAP®-XR Hip Bar top cap can be snapped into position** providing an umbrella like cover over the abutments protecting them from the elements.

Glazing sheet and protective film

2. **Seal the ALUKAP®-XR Standard 60mm Base Bars** where they abut the ALUKAP®-XR Hip Bar upstand, with a suitable low modulus neutral cure sealant. Then snap on the ALUKAP®-XR Standard 60mm Top Clips **which should also be mitred** to abut the face of the ALUKAP®-XR Hip Bar.

3. Once the final sealing of the adjoining bars is complete. **Fix the ALUKAP®-XR Endcap to the ALUKAP®-XR Hip Base Bar** (the same method as used for Standard ALUKAP®-XR Glazing Bars shown in Part 1).

SECTION DETAIL

ALUKAP®-XR : Roof Lantern End and Lantern Caps

16a The ALUKAP®-XR Radius End Cap

The ALUKAP®-XR Hip Bar can also be used to **create a roof lantern**. The ALUKAP®-XR Roof Lantern Pinnacle Top Cap and Radius End Cap are designed to work in conjunction with the ALUKAP®-XR Hip Bar for this purpose.

Fix the ALUKAP®-XR Radius End Cap to the end of the ALUKAP®-XR Hip Base Bar, once secured snap the umbrella-type top cap to the base bar, administer a **suitable sealant** to make a water tight finish.

ALUKAP®-XR : Ridge Bar

The **ALUKAP®-XR Ridge System** is designed for larger full ridge applications. The following information shows various options whilst installing the ALUKAP®-XR Ridge system, whether you prefer to add Crests, Finials or have a plain finish.
17a ALUKAP®-XR Ridge Base Bar

1. Cut the **ALUKAP®-XR Ridge base** and **two lengths of the thin standard bar gasket** to the desired length.

2. Lay the cut-size A**LUKAP®-XR Ridge Base Bar directly above the ridge rafter, on top of the glazing materials.**

Base bar

ALU**KAP**®-XR

3. **Drill appropriately sized holes through the ALUKAP®-XR Ridge base bar** into the rafter as required. **NOTE: The first and last holes should be a maximum of 100mm from the ends and then at 300mm centres in between.**

4. **Screw the ALUKAP®-XR Ridge Base into place taking care not to over-tighten the screws** but ensuring that they are tight enough that the gaskets are creating a uniform seal with the glazing materials.

Timber Rafter
ALU**KAP**®

17b

Fit the ALUKAP®-XR Crest Finial (optional)

1. **CAREFULLY cut the ALUKAP®-XR Ridge Top Clip** to the **ALUKAP®-XR Ridge Base Bar**.

2. **Run a bead of sealant down the channel** of the ALUKAP®-XR Ridge Top Clip.

3. **Slide the ALUKAP-XR Finial into position along the top slot** of the ALUKAP-XR Ridge Top Clip.

**WARNING: The Finail should be fitted PRIOR to attaching the ALUKAP®-XR Ridge Top Clip to the ALUKAP®-XR Ridge Base bar.**

ALU**KAP**®-XR

SECTION DETAIL – STANDARD FINIAL

ALU**KAP**®-XR

ALU**KAP**®-XR

17d

Fit the ALUKAP®-XR Ball Finial (optional)

1. **Drill a 14-15mm diametre hole through the top of the ALUKAP®-XR Ridge Radius End Cap** half way through the top cap and the lower fixing plate.

2. **Apply a suitable sealant** to the upper surface of the ALUKAP®-XR Radius End Cap where the ALUKAP®-XR Ball Finial will connect and also to the underside matching area of the ALUKAP®-XR Ball Finial.

3. **Fix the ALUKAP®-XR Ridge Radius End Cap and ALUKAP®-XR Ball Finial to the ALUKAP®-XR Ridge Base Bar** and secure with the supplied fixing screw. Seal any abutments and connections with a suitable sealant.

ALU**KAP**®-XR

SECTION DETAIL – BALL FINIAL

4. **Place the ALUKAP®-XR Ball Finial on top of the ALUKAP®-XR Ridge Radius End Cap** resting on the flat part of the End Cap and **fix the bolt throught the underside of the ALUKAP®-XR Ridge Radius End Cap making sure the Ball Finial is tightly secured.**

SECTION DETAIL

SECTION DETAIL

NOTE: Make any additional seals with a suitable sealant as required where the ALUKAP®-XR Ridge Base Bar make any abutments or connections.

17f Fit the ALUKAP®-XR Ridge Top Cap to the ALUKAP®-XR Base Bar

1. Lower your pre-cut ALUKAP-XR Ridge Bar Top Cap onto the base bar so that the two opposite pairs of inner vertical lugs engage.

2. Use a suitable rubber/plastic headed hammer to gently snap the top cap down on both sides so that the outer location lugs snap firmly together.

ALUKAP®-XR Top Cap

IMPORTANT: It is vital that both these outer snap-fix engagements are fully made all along the ENTIRE LENGTH of the ALUKAP®-XR Ridge Bar.

NOTE: Make any additional seals with a suitable sealant as required where the ALUKAP®-XR Ridge Top Clip make any abutments or connections.

NEW The **ALUKAP-XR Ridge Top Clip** has been manufactured for applications where no crests are required and fits exactly on top of the open slot area on the top cap open slot.

FITTING INSTRUCTIONS: Seal under the two flanges with a suitable sealant the full length of the clip. Then push the **ALUKAP-XR Ridge Top Clip** into position.

ALUKAP®-XR Base Bar

ALUKAP®-XR

ALUKAP

Timber Rafter

WARNING: As a security feature the **ALUKAP®-XR Ridge Top Cap and ALUKAP®-XR Ridge Top Clip are designed to be fixed permanently**; it will not be easy to remove once the final snap-fix has been completed!!

ALUKAP®-XR

ALUKAP®-XR : Valley Bar
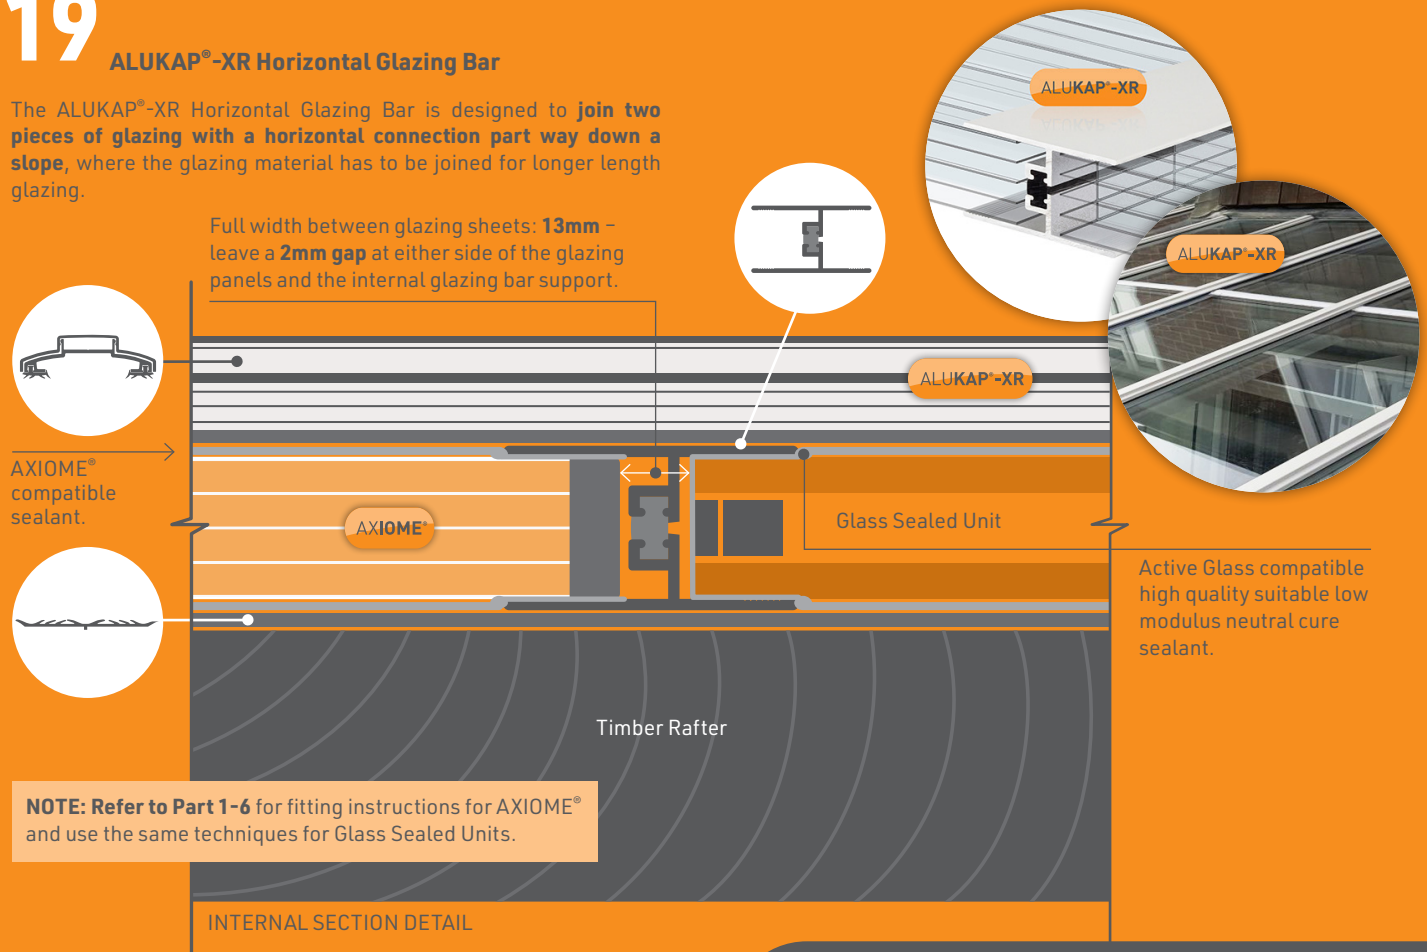

18 ALUKAP®-XR Valley Bar

The ALUKAP®-XR Valley Bar is one entirely unique patented design. It is designed to **recess into a timber valley so that it is entirely concealed**. It's double gasket water seal, ensures that there are no possibilities of leaks. The high-capacity channels ensure a fast rainwater flow. The ALUKAP®-XR Valley Bar suits almost any angle of glazing. For extreme angles the ALUKAP®-XR Valley Bar can be simply tilted within the Valley timber if required.

Example with single glazed AXGARD® or single glass.

Example with a Glass Sealed Unit
