

# INCREDIBOND

## High Strength Solvent-Free Grab Adhesive

**Technical Data Sheet** 

## THE SUPERHEROES RANGE

## **Description:**

A fibre reinforced, high strength, solvent-free, instant grab adhesive that sticks almost anything to anything. Can be used as an alternative to screws and nails.

#### **Benefits:**

- Fibre reinforced.
- ◆ High strength; Instant grab:- initial grab in excess of 2000N/m².
- High dry bond strengths to match those achieved by solvent based grab adhesives.
- Higher dry bond strength than the majority of hybrid polymer type adhesive/sealants.
- ◆ Solvent-free, low odour, no VOC emissions.
- Excellent adhesion to a wide range of construction materials.
- For interior and exterior use.\* (\*in sheltered external positions only and not if subjected to water immersion).

**INCREDIBOND** has a higher initial wet tack, so can hold more weight immediately. It has a higher bond strength, so in theory, you would need to use less **INCREDIBOND** than a solvent-free adhesive.

It also has better adhesion to some plastics, like uPVC, but bear in mind if you are using it on plastics. that the product needs one porous surface to allow it to dry.

#### Uses

Suitable for fixing skirting boards, dado rails, coving, architraves, polystyrene mouldings and key holders. For use with most common building materials, wood, OSB, chipboard, concrete, plaster, mortar, ceramic, metal (galvanised) steel, uPVC and most plastics. **Note:** at least one surface must be porous otherwise drying times will be significantly longer.

#### **Application**

Ensure all surfaces are clean, dry and free from grease and dust or loose material. Friable surfaces or laitance must be removed prior to application. Carefully cut the tip of the cartridge taking care not to damage the threaded area. Screw on the nozzle supplied and cut to the desired bead size. Apply using a standard sealant gun. Apply a continuous bead of adhesive to one surface and press the 2 parts together as hard as you can or tamp lightly with a rubber mallet. Load can be applied after 24 to 48 hours. Heavy items may need to be underpinned or temporarily supported for 48 hours. For panels and larger object, apply 6mm beads at 20cm centres.

#### **Limitations**

Do not use in very wet or continuous water immersion environments. Do not use on polythene, polypropylene, or bitumen. Certain substrates may require priming. Always test a small inconspicuous area prior to use.

#### **Cleaning**

Tools should be washed with water immediately after use.

#### Colour

Available in white only.

#### **Container Size**

310ml plastic cartridge.

#### **Shelf Life**

12 months from date of manufacture when stored in unopened cartridges.

#### **Storage**

Store in cool, dry conditions between +5°C and +25°C. Protect from frost.

### **Disposal of Containers**

Do not leave empty containers where residue could be harmful to children, animals or the environment. Remove any bags or material to a central disposal point in accordance with local regulations.

## **Health & Safety**

Please refer to separate material safety data sheet for full handling, use and storage instructions. Keep out of reach of children. It is the users responsibility to determine suitability for use. If in doubt contact our Technical Department for advice.

Note: this information is for general guidance only, since site conditions and labour are beyond our control. It is recommended that users make their own tests to determine suitability.

Specification Summary	
Consistency	Paste
Specific Gravity	1.4 g/cc
Application Temperature	+5°C to +30°C
Temperature Resistance	-20°C to +50°C
Open Time	15 minutes
Initial Grab	At least 2000 N/m²
Bond Strength: wood to wood	>8N/mm²
Bond Strength: wood to uPVC	>1.5N/mm²
